PRODUCT DETAILS

Hi-fi for all music friends, and interior design, style and every budget

The X-CM 56 is small enough to find space just about anywhere – and large enough for adequate sound in the living room.

Its smart, Scandinavian-inspired design supports different setup versions and, thanks to four colour combinations, can be seamlessly integrated into any interior design. In addition to the wood look with classic white and black fronts, the beech/apricot and beech/mint combinations are offered for a fresh splash of colour. Musical diversity reigns as well: classic sources such as UHF radio and CD are joined by smartphones and memory sticks.

The latter are simply plugged into the USB port on the front, the former connected wirelessly via NFC-Bluetooth.

Regardless of the installation location, the sound of the X-CM 56 will surprise you – especially since the tone regulator, bass enhancer and equaliser permit adaptation to the room acoustics and listening preferences.

Last but not least, Pioneer also included a programmable alarm function that welcomes you by filling the room with your favourite music in the morning.
